Hardy Plants and Shrubs Fruit, Shade and Ornamental Trees

Our New Dianthus, Joliet

MULE PINK

One of the handsomest of all perennials. Very much resembling the carnation. Leaves of a somewhat heavy texture; flowers a most brilliant dark crimson in great profusion; clove-scented. Blooms from spring till heavy frost. Fine for cutting. Also does well as an indoor plant, and will bloom all winter. We are disseminating this, this fall. They grow about 18 inches high and are perfectly hardy.

Fine, large, 2-year field grown plants, 50 cts. each, \$5 per doz., postpaid

See letter on third page of cover concerning this new Dianthus.

Price-List for Fall and Spring of 1909-1910

General Instructions

LOCAL DELIVERY.—We deliver stock free to all parts of Joliet and vicinity. **PACKING.**—Our stock is not priced to cover packing. The actual cost of material and labor will be an extra charge—for distant shipments. No charge for drayage to express or freight offices.

REMITTANCES.—Post Office Money Orders, Express Money Orders, Bank Drafts or Registered Letters are the only safe ways for remittances. Coin should not be sent by mail. We accept Stamps for small amounts.

INFORMATION.—We shall be pleased to answer all letters of inquiry from our customers as regards plant culture or botanical problems.

ADDRESS.—Please write plainly, your name, post-office, county and state and express office.

SHIPMENTS.—Small plants only will be sent by mail, and will be postpaid by us.

PLANTING.—Perennials or Hardy Herbaceous Plants, for shipment, have the

PLANTING.—Perennials or Hardy Herbaccous Plants, for shipment, have the dirt all washed from their roots and are packed in damp moss. In planting, be careful not to crowd the roots. Separate them or spread them out well. Dig large holes. For fall planting, mulch well to prevent lifting by the frost.

GUARANTEE.—We do not guarantee stock to grow. Failure in most cases is due to such causes as soil and weather conditions beyond our control; careless planting, and lack of care, by allowing weeds to grow up and choke out. (By special agreement, we do guarantee shrubs and trees planted by ourselves.) We send out only first-class stock, thoroughly inspected and no other. We build our reputation on this fact.

We carry the largest and most complete line of Perennials west of Philadelphia. Our Stock is fine, healthy and well grown

Improved by the Joliet Nurseries Company. Two years planted. Full grown, this planting, shrubs and perennials, will conceal the barn

Landscape Department

This department is under the direct supervision of Mr. T. C. Shepherd, Sr., the well-known landscape architect. He would be pleased to furnish you with estimate of cost of improving your grounds, no matter how small or how large. Our landscape work is done only in accordance with plans and specifications. We plant no other way. Haphazard planting of shrubs, trees and plants is not landscape gardening, and you cannot expect to have an artistic planting done in this manner. Our plans are well studied before presenting. Stock is chosen for each particular job, regardless of whether we have it on hand or not, for it is the effect when plants mature that must be kept in view. The mere planting of trees, shrubs or plants in fancy, outlined beds or borders has no meaning, there is nothing effective in a bunch of shrubs growing as they are planted in a nursery. It is the proper combination that produces the effect, and there must be familiarity with the habits of each plant in order to get results. Each particular variety has its own individuality, and should be treated accordingly; for, in a planting, it has its particular place or position. Color of foliage, and its different shades, form, height, habits, period of bloom and color of bloom,—all these are to be taken into consideration, and should be iring about most beautiful results. Nature teaches us the rudiments of this work and we, therefore, should study her plans very closely. Planting is more for the future than for the present. The best effect is to be obtained only when all have attained their proper height and form. We measure your grounds, take notes of the surroundings and location of other objects, with a view to embellishing any good effect you may already have, bringing it into harmony with the surroundings, screening or hiding unsightly outbuildings, fences, etc.

It must also be understood that not only the contour and foliage effects of the summer months are in the mind of the landscape architect, but the bleak winter months also have their part, and the planting is to be touched up by the proper combination of colors in barks, dispersing much of the cold, dull appearance of the border during this period. We also furnish plans and specifications, that you may do your own

planting, for a nominal sum.

We shall be glad to help you by giving you such information in regard to treatment and culture as may be desired, gratis. We wish to see you successful and have you attain good results from your planting, for success to you in this means creating enthusiasm among your friends and neighbors,—all of which is to our advantage.

SODDING.—We contract to do sodding by the square foot, or by the job. We also sell sod. Our sod supply is unlimited, and we furnish good blue-grass turf.

Hardy Perennials

These are non-woody plants, their roots living through the winter, their tops dying to the ground. They are becoming more popular each year, both as an exclusive border or scattered among shrubbery, giving a touch of color when shrubs are not in bloom. Our list includes many of the best varieties, ranging in height from the creeping sorts to 6 or 8 feet tall, and a great variety of colors. They bloom from early spring until heavy frosts. We have sorts suitable for almost any location.

OUR NEW DIANTHUS, JOLIET

(See illustration and description on 2d cover)

Last year we sent a few sample plants to a well-known eastern seedsman to try. The following is a letter received from him after having tested its merits:

"Replying to your favor of September 2, we are pleased to note the name which you have designated for your new Dianthus. Kindly advise us if you have any of the plants for sale."

OFFICE OF THE ILLINOIS STATE ENTOMOLOGIST

URBANA, ILL, August 26, 1909.

This is to certify that the growing nursery stock and premises of the Joliet Nurseries, situated near Joliet, Ill., have been inspected by M. F. Osborn, a duly appointed inspector of this office, according to the provisions of an act to prevent the introduction and spread in Illinois of the San José scale and other dangerous insects and contagious diseases of fruits, in force July 1, 1907, and that said nursery and premises are apparently free from the San José scale and other dangerous insects and dangerous plant diseases.

This Certificate applies to the condition of this Nursery for the year ending July 16, 1910.

S. A. FORBES,
State Entomologist.
